

## Multi-layer lamination solutions

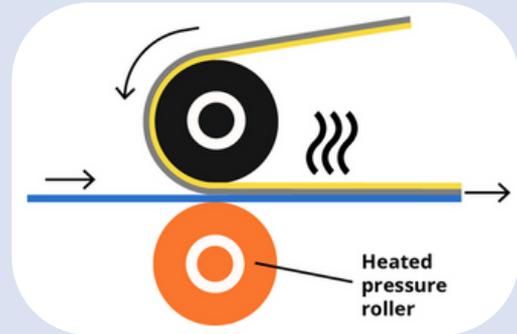

**We offer lamination services, providing bonding solutions tailored to a wide range of industrial applications**

### Adhesive Lamination

Adhesive is **applied cold** to a support and transferred to the substrate, enabling tailored **multi-material combinations**

### Lamination

**Heat-activated** hot-melt films are fused **under pressure** to create a robust, durable, and repositionable bond.

### Our organization

For more than **35 years**, STEP INTERNATIONAL provides tailored **adhesive solutions and protective films**, as well as **converting** services for customised roll widths and lengths.

# Advantages

**Multi-layer lamination**  
Up to three substrates can be bonded in one step

**High bonding precision**  
Uniform adhesion

**Material versatility**  
Plastics, foams, adhesive tape, textiles, aluminum, paper, composites, carbon, polypropylene, polyethylene, cardboard etc

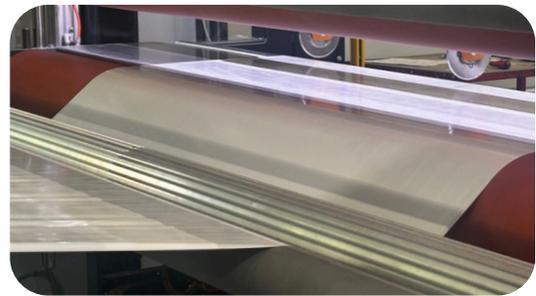

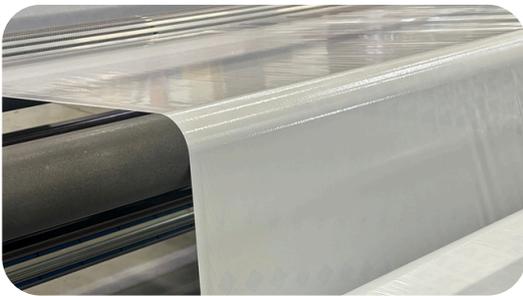

**Eco-Friendly process**  
Solvent-free, promoting environmentally sustainable adhesion

**Enhanced material performance**  
Adhesion, cohesion, thermal and chemical resistance tailored to your requirements

**Industrial-grade quality**  
Consistent, repeatable results  
Pre-assembled multi-layer solutions

# Industrial Applications

## Building

Insulation materials, sealing, and assembly applications

## Automotive

Technical films, adhesives, interior elements

## Electronics

Insulating films, flexible printed circuit boards, labels

## Aeronautics

Technical films for carbon composites and protective solutions for lightweight materials

## Military

Multi-layered technical films

## Luxury

Decorative films, luggage, point of sale
